Connectivity with family

Don't have to spend so much money on data

It would develop the community because once people have access to the internet they are able to learn online

In your own words, how do you think smart streetlight Wi-Fi could improve your community?

31 responses

Internet access with better communication

Better knowledge on things they currently don't know

Smart streetlights could serve as Wi-Fi hotspots, providing free internet access to residents and tourists. This could be particularly valuable for students, those with limited data plans, and anyone looking for an easy way to connect online.

Impeccable

It can help people get access to the internet and make a living out of it

It will improve due to individuals will have access to internet connection at any public space they are exposed to

It would help a lot more especially to disadvantaged communities where there are a lot of school kids with no money to buy data everytime they need to complete their homeworks and assignments

31 responses

Get the people connected on current affairs and grant access to digital opportunities

Will make people busy

1. **\*Enhanced Connectivity\***: Provides free or low-cost internet access, bridging the digital divide and enabling residents to stay connected, work remotely, and access essential services.
2. **\*Increased Safety\***: Enables real-time monitoring and surveillance, improving public safety and emergency response times.

Would eradicate the lack of internet access and expose the youth to opportunities that are found online

Everyone will be able to get connected or access to wifi , no one will be disadvantaged because they could be able to connect

People would get exposed to information, trends and news

Everyone will have access to the internet, therefore buying less data and being able to economise
